SATURNE®
Cemented tripolar cup
SATURNE® acetabular component and acetabular ring

- Anatomical anti-dislocation profile.
- Flattened pole.
- Rounded up edge of the cup.
- Grooves for a homogeneous distribution of the cement.
- M30NW cup: mirror-polish inner surface and sand-blast exterior surface.
- No hole.

- Insert for Ø 22.2 mm or Ø 28 mm femoral head (metallic or alumina).
- Peripheral bevelled protecting the insert’s retention area.
- UHMWPE insert.

- Anatomic acetabular rings: left and right
- Anterior branch shorter than the posterior one.
- M30NW hemispherical cross 2 mm thick, with:
  - in the lower part a positioning foramen hook.
  - in the upper part a plate with 4 holes for fixation with 4.5 mm cortical screw.
- Sterile packaging.
SATURNE® acetabular component

- The cemented SATURNE® cup combined with the acetabular ring enables the dual mobility for bone reconstruction with requires a cement fixation.

SATURNE® acetabular component: instrumentation

- Navigable instrumentation identical for cemented and cementless SATURNE® cups and for the reconstruction SATURNE® cup.
- Minimal obstruction for the reduced access ways.

Acetabular ring: instrumentation

- Instrumentation allowing the confirmation of the size and the orientation of the implant.
SATURNE® acetabular component: implants
