

Medial Rotation Knee™ System

MRK™ is reported – again – as the total knee replacement (TKR) brand with the lowest revision rate of all UK TKR:

2.93% (95% CI: 2.53–3.40) at **15 years**¹
3.25% (95% CI: 2.58–4.09) at **18 years**¹

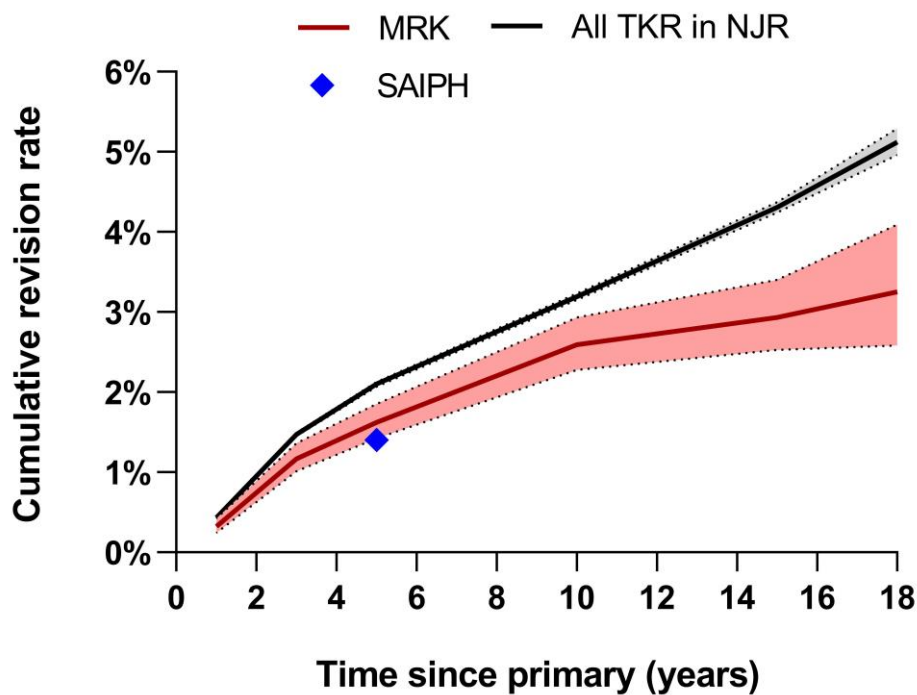

MRK™ is performing significantly better ($p < 0.001$) than all other NJR bicondylar TKR recorded in the National Joint Registry (NJR)^{1,2}, as shown in the graph.

SAIPH[®] Knee System

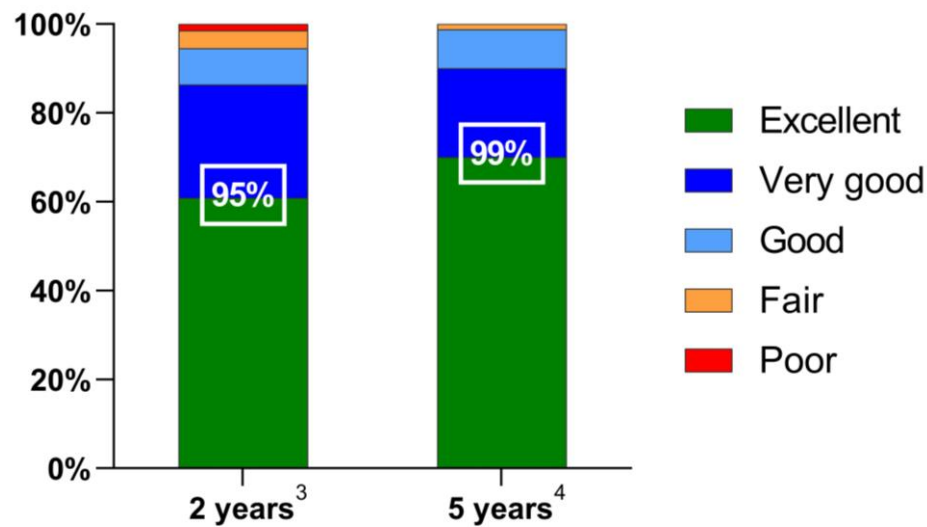

SAIPH[®] is reported to have a lower revision rate than MRK[™] at 5 years¹, as show in the graph below, and is one of only four device brands with an overall revision rate below 1.5% at 5 years¹, namely:

1.40% (95% CI: 0.94–2.09) at 5 years¹

SAIPH total number implanted is 2,416 and the 95% confidence interval is 0.94 – 2.09% at 5 years¹.

The low revision rate is also associated with >95% patient satisfaction^{3,4} at 2 and 5 years post-operatively.

The 95% and 99% of patients answered 'excellent', 'very good' and 'good' at 2 and 5 years post-operatively, respectively, to the question 'How would you describe the results of your operation?'.
